FAUS INTERNATIONAL FLOORING

---

# THE COMPANY

---

FAUS INTERNATIONAL FLOORING started up as a small carpentry shop more than 60 years ago. Since then, it has developed, always with a sustainable philosophy and a commitment to its environment.

The entire production process is carried out at the more than 90,000m<sup>2</sup> facilities situated in Valencia (Spain), here our team accumulates all the knowledge, experience and unique technologies that characterize the FAUS products, allowing us to create interior decorative solutions for any home or business.

Constant evolution, technology and innovation have always, from the very beginning, characterized our products.

---

# **OUR ENVIRONMENTAL COMPROMISE**

---

FAUS has always been highly committed to nature and the environment. Therefore, since the start, it has formed part of the PEFC: Program for the Recognition of International Forest Certification, which promotes the sustainable management of forests and the FSC: Forest Stewardship Council.

Both accreditations represent the largest certification system in the world, covering more than 240 million hectares of certified forests, representing around two thirds of the certified forest area worldwide.

In addition, the manufacturing process of FAUS products is aimed to improve manufacturing sustainability, favoring the reduction in raw material consumption, promoting recycling of waste, minimizing energy consumption in the manufacture of components and also helping to reduce the environmental footprint.

All these factors allow us to ensure that our floors are 100% environmentally friendly.

---

# **FAUS FLOORS ADVANTAGES**

---

## ABRASION RESISTANCE AC6 / AC5

FAUS laminated flooring is characterized for its high resistance to wear and tear. Qualities which guarantee that the appearance of the product is not altered by time keeping its finish and appearance intact.

## CLASS OF USE 33

Thanks to the technical properties and quality of the materials used, the tests carried out classes FAUS flooring at class 33, ensuring that they are suitable to be installed in spaces with a high level of circulation.

## FIRE RETARDANT

Resistant to fire. Due to the treatment the flooring receives in its manufacturing process, FAUS floors are certified as Euroclase Bfl-s1 (EN13501-1). Certification that makes them suitable for high risk environments, as required by the Technical Building Code (CTE).

## ANTISTATIC

Manufactured with properties that help prevent or eliminate static electricity, FAUS floors help promote comfort and well-being in any situation.

## HDF "HIGH DENSITY FIBERBOARD"

FAUS flooring has a high-density fiber board, composed of water-repellent resins that prevent the floor from swelling and preventing the appearance of debris between joints. In turn, it minimizes the dilatations produced by changes in temperature and humidity.

## SEALING EDGES AROUND THE PERIMETER

The entire surface of the FAUS anchoring system is impregnated with paraffin that repels moisture and protects the floor in the event of occasional filtration.

## JOINTGUARD

The joints between floor boards are totally protected thanks to the patented FAUS technology, Jointguard. This technology protects the edges of the floor boards against rubbing and footsteps.

## HIGH SURFACE RESISTANCE

All FAUS floors have a high surface resistance to impact, wear, scratching and burns.

## ANTIALLERGIC AND ANTIBACTERIAL

Due to the composition of FAUS products, they have anti allergic and anti bacterial properties, which make them the ideal flooring for families with children.

## SUITABLE FOR FLOORS WITH UNDERFLOOR HEATING

FAUS laminated floors are fully compatible with under floor heating systems.

## HEALTHY FLOOR

SCS Global Services, company that regulates indoor air quality, has granted FAUS the Indoor Air Quality certificate SCS-EC10.3-2014 v4.0 for overcoming all the tests related to indoor air quality.

## ENVIRONMENTAL FRIENDLY

With the FSC and PEFC certifications, FAUS certifies that all its flooring is manufactured in a sustainable and respectful manner. All the raw materials used come from excellent forest crops with sustainable exploitation.

---

# **PATENTED TECHNOLOGIES**

---

#### MICROBEVEL

Thanks to this technology, FAUS flooring perfectly reproduces the micro bends that form in the floor boards when imitating the cast. In this way, each board faithfully highlights the design, presenting a completely natural look.

#### REALFEEL

100% realistic floors that imitate every detail of the noble materials. Feel the naturalness of the wood, the roughness of stone and enjoy the softness of ceramic with the tips of your fingers without losing the warmth and comfort offered by laminated floors.

#### INTERPLANK

Patented technology that allows our designs to form patterns that go beyond the floor itself, achieving a final result that is totally genuine and uncut.

#### LONGSTRIP

With this technology, we obtain boards up to 3 meters long. In this way it is possible to reproduce large format designs, maintaining a comfortable size and easy to transport and install.

### HANDSCRAPED

Perfect recreation of the effect that the artisans achieved in the past by manually brushing the wood, achieving smooth and elegant undulations on the floor's surface.

### MULTIWIDTH

The extra wide format of the FAUS floors allows the integration of a cast of 3 different widths and lengths in a single 40 cm wide board. In Multiwidth designs, the combination of Jointguard, Microbevel and Interplank technologies causes a natural effect in the installation, in which the rectangular format of the boards are blurred making the joints invisible and making it very difficult to tell the difference between an artisanal installation of solid parquet.

### ULTRA MATT

Get a worn effect of sawn wood with the new Ultra matt manufacturing technology. Ultra Matt laminated flooring is a new category in the world of decorative products. They are made of intense anti-fingerprint matte, which prevents finger marks. Its surface is subjected to a different technology, at the same time, hard and protective, applied on an Extreme board support, making it a high-range durable product.

### MULTIDIRECTION

The "stone effect" FAUS laminate floors have a technology that allows the design to extend to all four sides, resulting in a genuine design of random placement, which also has as a feature, imperfect joints.

---

# COLLECTIONS

---

Each FAUS floor masterpiece has been created with care by hand to last over time while maintaining its natural beauty and simplicity.

We invest all our resources and efforts in designing each detail of each piece, applying unique manufacturing technologies and selecting each material with the highest technical rigor.

The result obtained are inimitable decorative solutions (supreme, unmatched, incomparable), exclusive and with a high degree of sophistication. We aspire to identify ourselves with our client's lifestyle integrating our natural creations in their space.

Size: 2400 x 43 x 11 / 14 mm

(for thicknesses: 8 and 12 mm in laminate flooring).

**MOISTURE RESISTANT MDF STAIRCASE LOC**

Size: 2400 x 50 x 19 mm

(for thicknesses: 8 and 12 mm in laminate flooring).

## STAIR NOSE

FAUS nosing is the perfect complement for the finishing of your stairs. It allows to achieve a "lined" and continuity effect in its stairs with a professional look. Because this complement has the same colour and resistance as the laminate flooring.

### FAUS RADIANT

underlay with integrated vapor barrier, which provides thermal insulation and reduces sound transmission. It is also suitable for under floor heating

### INSTALLATION KIT

All the accessories you need to install FAUS Floor.

### INSTALLATION CLIP

The ideal or correct complement to install our wood design skirting boards.

### DRY KIT

Our laminate floors are suitable for kitchens and bathrooms thanks to our Xtreme technology, but as we want to completely ensure full protection against water, we offer you a new concept: DRY KIT, consisting of an aluminum baseboard (coupled with flexible silicone) + a sealant for laminate flooring joints that are more susceptible to get damp, although not necessary it is recommended for total security. We invite you to watch the video.

ALUMINIUM SKIRTING

# LOC STAIR PROFILE

The LOC Stairs Profi le is used for finishing step edges, achieving perfect levelling with no protrusions.

## ASSEMBLY INSTRUCTIONS

1

On a dry and level surface, cut the Faus flooring to the same size as the front edge and glue with silicone. Leave the tongue pointing downwards. The groove should point upwards and can be cut if necessary.

2

Once the front sides have been glued (1), you can then cut the LOC Stair Profi le to the same size as the step. Cut the corners of the profi le at 45 degree angles to form the angle of the stairs and cut the other ends straight.

3

By placing the profi le provisionally, you can measure the distance (footprint) of the front piece to the LOC Stair Profi le. To cut the piece of fl oor, turn it around leaving the decorative side pointing downwards. From the side where the groove is (which protrudes the most), measure the size of the footprint PLUS another 7 mm. Then cut the piece of fl ooring on the side of the tongue, leaving the groove in place.

4

Measure the length of the step and cut the piece of fl oor to size on both sides, in such a way as to match the transverse tongue and groove.

5

We glue the fl oor pieces with silicone. We also glue the LOC Stair profi le with silicone but for the mitre joint edges we use white glue. We shall repeat this operation for all the steps that make up our stairs.

6

In order to hide the sides of the front pieces we use decorative tape or an expansion profile from the range of Faus accessories, as a flap just contouring the base of the profile.

## GUARANTEE

To ensure the durability of FAUS FLOOR it is essential that it meets the following recommendations:

- The installation of an insulation blanket (underlay) FAUS under FAUS FLOOR.
- Keep an expansion gap around the perimeter of the facility and around any fixed object.
- Daily cleaning with a hoover or a mop. When using cloth or a wet mop, this should always be warm and drained .
- Do not use ammonia, bleach or soap products. Use only neutral PH non-abrasive detergent.
- "Check installation and maintenance instructions on [www.faus.international](http://www.faus.international)"
